

Elevator controller

KDH-KS2000-IP-ELV

The KDH-KS2000-IP-ELV elevator controller is designed to work in access control systems under the NMS ACCESS CONTROL or KaDe Premium Plus II supervisory program.

Elevator controllers, like the standard controller, consist of a module placed in a metal housing with a power supply. It should be mounted in the protected zone. The reader is installed in the elevator cabin. Readers can be in any identification technology provided they have a Wiegand interface.

The controller can operate up to 5 floors, up to 9 floors with one KDH-MOD2000-ELV extension module and up to 69 floors with 4 KDH-MOD2016-ELV extension modules.

The controller has a built-in IP port for communication with the management program and the RS485 port for communication only with the extension modules.

Readers port quantity	1
Dimensions (mm)	174 x 40 x 20
Readers port type	Wiegand
Communication ports	TCP
Card buffer	20 000
Event buffer	50 000
Outputs	5
Supply power	12 VDC
LED and buzzer output	1
Extension port	1 x 4 relays module
